

Battery lifetime transfer depends on data definition

Retrospective six-source audit · cycle-100 landmark · remaining-life prediction

1 Verify the cohort

6 public sources

429 verified cells

376 eligible at cycle 100

228 observed EOL events

2 Compare models

5 source-held-out methods

Different winners by source

NASA: one scoring horizon

Integrated score unavailable

3 Test target adaptation

20% target-cell calibration

No general Brier improvement

Only CALCE mean improves

Just 2 calibration cells

Conclusion: model rankings and endpoint choices vary; no universal transfer or validated dispatch benefit
